DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawakita (JP 10285325A) in view of Alam et al. (US PAT. 6,104,500 hereinafter Alam).

Regarding claim 1, Kawakita discloses a method for routing a facsimile having at least one page to at least one recipient comprising the steps of receiving text of at least one page of facsimile, converting the text of at least one document sheet into data, analyzing the converted data to isolate at least one recipient block, wherein the recipient block is on at least one page of the facsimile, locating an address of the at least one recipient by analyzing the recipient block and analyzing address data to determine an address corresponding to the at least one recipient, and transmitting the at least one document sheet to the at least one recipient at the located address (abstract). Kawakita differs from the claimed invention in not specifically teaching to divide text of at least one page of the facsimile into a plurality of blocks and to analyze each of the plurality of blocks to isolate at least one recipient block. However, Alam teaches a processor-based fax routing method comprising the steps of dividing text of at least one page into a plurality of blocks (24, 56, 58, figure 4) and analyzing each of the plurality of blocks to isolated

Application/Control Number: 09/479,997

Art Unit: 2643

at least one recipient block (56, figure 4) in order to provide a high-accuracy for spotting address in at least one document sheet (col. 7 line 50 through col. 14 line 34). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Kawakita in dividing text of at least one page of the facsimile into a plurality of block and to analyzing each of the plurality of block to isolate at least one recipient block, as per teaching of Alam, in order to provide high-accuracy for spotting address in at least one document sheet.

Regarding claim 2, Kawakita discloses a system for routing at least one facsimile page as shown in figure 7 o at least one recipient comprising a fax server as shown in figure 1 including a storage unit (6, figure 1) for storing data including an address database and a data processor (3, figure 1) programmed to receive text of at least one page of facsimile, to convert text of the at least one facsimile page into data, to analyze the converted text to isolate at least one of the blocks as a recipient block, wherein the recipient block is on at least one page of the facsimile, to locate the address of the at least one recipient by analyzing the recipient block, to analyze the address database to determine an address corresponding to the at least one recipient, and a transmitter (4, figure 1) for sending the facsimile page data to the addresses (abstract). Kawakita differs from the claimed invention in not specifically teaching to divide text of at least one page of the facsimile into a plurality of block and to analyze each of the plurality of block to isolate at least one recipient block. However, Alam teaches such (col. 7 line 50 through col. 14 line 34). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Kawakita in dividing text of at least one page of the facsimile into a plurality of block and to analyzing each of the plurality of block to isolate at least one recipient

block, as per teaching of Alam, in order to provide high-accuracy for spotting address in at least one document sheet.

Response to Arguments

3. Applicant's arguments with respect to claims 1-2 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington D.C. 20231

Or faxed to:

(703) 872-9306 (for Technology Center 2600 only)

Hand delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, V.A., Sixth Floor (Receptionist).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Eng whose telephone number is 703-308-9555. The examiner can normally be reached on Tuesday to Friday from 7:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curtis A. Kuntz, can be reached on (703) 305-4870. The fax phone number for the organization where this application or proceeding is assigned is 703-308-6306.

Art Unit: 2643

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 306-0377.
